Proposal

My name is Luca Veca, I am in period four, and I will be creating an online store for my company Madolescent. I will be working on this project with Donaji Ochoa. We will be doing the same project but working on it separately. Each project will end up looking different but we will help each other on some milestones. My project will be an online retail store for our company with profile abilities, purchasing abilities, and possibly a picture section. This website will be unique based on the clothing and style of the page. The page will be made with HTML 5, CSS, Javascript, and PHP.

I believe that the hardest challenge of this project will be creating the user login. To complete this task I am planning on referencing my previous website with login and the videos used to create it. Another thing that I believe will be a challenge is the purchase/ cart feature. I have never done anything like this so I think I will have to find most of my information online.

I would like for the website to include parallax because it is one of my favorite features. The site should have a hamburger menu with options for articles, shop, images, blog, and about. The site will have videos, pictures, and links of stuff we like that relate to the brand.

Milestone 1 - Create project, upload to github
Milestone 2 - Basic Layout (Title, Background, divs)
Milestone 3 - Links on main menu to social media
Milestone 4 - Upload some photos to a gallery page on carousel, give background image to site
Milestone 5 - Upload clothes to the shop page
Milestone 6 - Create links for each article of clothing
Milestone 7 - Fill out the about page with links to all employees social media and write bios
Milestone 8 - Add animations to buttons and other aspects of the site
Milestone 9 - Add background music on a playlist and link soundcloud
Milestone 10 - create hamburger menu
Milestone 11 - create paralax for the webpage
Milestone 12 - update design of site and clean it up
Milestone 13 - create map on site with store locations
Milestone 14 - start sign in process
Milestone 15 - start to work on a cart
Milestone 16 - create users
Milestone 17 - finish cart
Milestone 18 - add payment method
Milestone 19 - create mobile friendly version
Milestone 20 - create resizing feature so that the website resizes to fit any screen resolution.
